SECTION I

ORGANIZATION OF STATE AND COUNTY ASC COMMITTEES

The Soil Conservation and Domestic Allotment Act created the State, county, and community committees system. The State Committee consists of five farmers from different geographical agricultural areas and the State Director of Agricultural Extension Service. The five farmers are appointed by the Secretary of Agriculture. County and community committees are nominated and elected annually by local farmers.

These committees operate much in the same manner as a board of directors, establishing policy, interpreting regulations and furnishing general guidelines for program administration. None of the committee members are full-time employees. The day-to-day operation is the responsibility of the State Executive Director and staff at the State level, and county office manager and staff at the parish level.

The State office staff is presently composed of 38 full-time Civil Service employees. The cost of paying salaries, travel, supplies, equipment, and other administrative expenses in the operations of the State office is approximately \$394,000 each fiscal year. This amount, of course, is in addition to the operating expense of the parish offices.

At the present time, there are 288 full-time parish office employees, and each summer we employ approximately 450 field workers for a period of five or six weeks to measure acreages of allotment crops or otherwise determine the extent to which the farmers are complying with the various programs. The total administrative cost of operating these 61 offices is approximately \$2,360,000 each fiscal year. These funds, as well as the funds for operating the State office, are allocated to us from funds appropriated by Congress.

SECTION II

AGRICULTURAL CONSERVATION PROGRAM

Through the Agricultural Conservation Program administered by the Department of Agriculture, the Federal Government will share with farmers the cost of carrying out approved soil-building and soil and water conservation practices, including related wildlife, recreation, and beautification conservation practices.

Funds for this purpose are authorized by Congress in recognition of the fact that these resources are vital not only to the farmers and ranchers who operate the land but also to the health and well-being of each citizen, both now and in the future. This assistance is viewed as an investment in the public interest to help insure the wise use and adequate protection of the Nation's farmlands.

The ACP operates as a Government-farmer partnership. Assistance available to the farmer is in the form of materials, services, and cash payments. This financial aid averages about 50 percent of the cash outlay in performing the conservation practices. All farmers are eligible to participate and the program is administered locally by elected ASC county and community committees. Assisting in the operation, development and technical phases of the program are representatives of the Soil Conservation Service, Forest Service, Extension Service and other Agriculture agencies.

The following statistics show the extent and distribution of the conservation measures applied to the land on farms in Louisiana under the ACP during the 1966 fiscal year (July 1, 1965 through June 30, 1966).

no. 1000000000 program administered by
the U.S. Forest Service will
be carried out approved soil
water conservation practices, including
flood, and reclamation conservation

and are authorized by Congress in recognition
that resources are vital not only to the
economy but also to the health and

SECTION II A

ACP EMERGENCY CONSERVATION MEASURES

Twenty-two Louisiana parishes were designated as disaster areas under Public Law 85-58 as a result of damage to farmland caused by Hurricanes Hilda and Betsy. Emergency funds were allocated to these parishes to carry out eligible practices to restore this land to its normal productive capacity. The following statistics show the extent and distribution of these funds during the 1966 fiscal year to grade and smooth farmland, to reconstruct farm irrigation systems, to reconstruct protection levee systems, to reconstruct floodgates for control of tide and backwater, to reestablish permanent vegetative covers, to reconstruct permanent open drainage ditches, to reconstruct cattle walkways, to restore and replace permanent fences, and to clear debris from farmland.

1/

SECTION III

THE ACP CONTRIBUTES TO WATERSHED PROGRAMS

Carrying out needed soil, water, woodland, recreation wildlife, and beautification conservation practices is the backbone of any watershed program.

Structures to store water or to prevent flooding are only partially effective unless basic conservation practices are applied to the individual farm lands above them. Organized watershed associations cannot qualify for Federal assistance under watershed laws until at least fifty percent of the basic land treatment is accomplished or planned for on the land involved.

ASC committees are cooperating with Federal, State and local organizations and agencies in the development of watershed plans and projects. The ACP is particularly effective in expediting the applying of conservation practices on individual farms.

The following tables point out ACP's contribution to watershed programs.

SECTION IV

CROPLAND ADJUSTMENT PROGRAM

The Cropland Adjustment Program was authorized by the Food and Agriculture Act of 1965. This program is aimed at removing from surplus production up to 40 million acres for periods of five to ten years. Emphasis is on shifting this land into public benefit uses which also conserve soil and water to meet future needs.

The Cropland Adjustment Program, which supplements the yearly commodity programs, will reduce over-all program costs by obtaining acreage diversions at lower rates over extended periods of time. Long-term agreements afford farmers more stability and thus better opportunity for planning adjustments in land use.

CAP will help farmers divert cropland to protective conservation uses under five to ten year agreements. Participants will receive adjustment payments related to the value of the crops normally produced on the land. They also will be eligible for conservation cost-share payments on the diverted land. And those who agree to permit free public access for fishing, hunting, hiking, and trapping in accordance with appropriate State and Federal regulations, will get an additional per-acre payment.

A special section of the CAP will help State and local government agencies purchase cropland and establish thereon practices and uses for (1) preservation of open spaces and natural beauty, (2) development of wildlife or recreational facilities, and (3) prevention of air and water pollution.

SECTION V

PILOT CROPLAND CONVERSION PROGRAM

The Pilot Cropland Conversion Program (CCP) was authorized by the Food and Agricultural Act of 1962. The authorizing legislation provided \$10 million for the 1963 Pilot CCP and limited the U. S. Department of Agriculture to an expenditure of \$10 million for the program in any one calendar year. The 1965 Fiscal Year USDA Appropriation Bill provides \$15 million to finance a Cropland Conversion Program for the calendar years 1964-65. The 1966 Bill provides \$7.5 million to finance the 1966 program.

The general objectives of the program are to improve family farm income by promoting better economic use and conservation of farmland through long term agreements with farmers, providing for the conversion of cropland from the production of crops to pasture, forest trees, wildlife habitat, and income producing recreation facilities.

The pilot program is being tested in a selected number of states and parishes (counties) and agreements have been entered into with a limited number of farmers in 1963, 1964-65, and 1966.

Agreements with farmers are for periods of five to ten years. Adjustments and cost-share payments made to farmers are not income payments but, rather are designed to provide limited assistance in shifting cropland to alternate income-producing uses.

SECTION VI

SOIL BANK

CONSERVATION RESERVE PROGRAM

The Conservation Reserve Program was designed as a long-term program to assist farmers in diverting a portion of their cropland from the production of excessive supplies of agricultural commodities and to carry out soil, water, forest and wildlife conservation practices. County committees, in behalf of the Secretary, entered into contracts with producers to share the costs of establishing approved conservation practices on the conservation reserve and to make annual payments to such producers for maintaining the conservation uses for the period of the contract.

SECTION VII

ACREAGE ALLOTMENT AND MARKETING QUOTA PROGRAMS 1/

The purpose of allotment and marketing quota programs is to reduce supplies of cotton, rice, peanuts, and most types of tobacco when supplies of any of these commodities exceed normal requirements by a certain percentage. When a reduction in supplies of one of these crops is indicated, the Secretary of Agriculture must establish a national acreage allotment and marketing quota for the crop. The national cotton allotment cannot be less than 16,000,000 acres. With current yields, production from this acreage has been exceeding consumption. The Agricultural Act also has a minimum allotment for rice.

The national allotment is generally the number of acres that given normal yields will result in a reduction in production of the crop to a level equal to the expected consumption, plus exports and a reserve supply. The national allotment, with certain adjustments designed to prevent hardships to growers, is divided among the states, counties and farms on the basis of past plantings of the commodity.

Whenever the Secretary proclaims that a cotton or rice allotment program will be in effect, producers of the applicable crop vote in a referendum as to whether or not they want marketing quotas to apply to the crop. If two-thirds or more of the farmers voting in a referendum vote favorably, marketing quotas are in effect and the loan rate is set at not less than 75 percent of parity.

Under marketing quotas, a stiff penalty is assessed against a farm that plants in excess of the farm allotment for the crop, and this serves as a deterrent for overplanting allotments.

If two-thirds of the farmers voting do not vote in favor of marketing quotas, the allotments remain in effect but marketing quotas do not apply and the only restriction on overplanting is that the farmer is not eligible to place the crop under the price support loan program. The price support loan rate in such case is established at 50 percent of the parity price for the commodity.

In Louisiana, allotment and marketing quota programs are in effect for rice, cotton, and peanuts in 1966.

1/ For data on the 1966 voluntary cotton diversion program, see pages 80 and 81 in the diversion program section.

SECTION VIII

VOLUNTARY DIVERSION PROGRAMS

Voluntary diversion programs are designed to reduce surplus commodity stocks. Participating farmers agree to reduce planting of the commodity and devote this acreage to conserving uses. Diversion payments are made to farmers to compensate them for reducing plantings and participating farmers are eligible for price support. Wheat farmers also receive marketing certificates which may be converted to cash.

Significant reductions in the tremendous carryover of government stocks of feed grains and wheat have occurred since the feed grain program was placed into effect in 1961 and the wheat program in 1964.

Cotton farmers in 1966 were also offered a voluntary diversion program patterned after the feed grain and wheat programs. Most cotton farmers participated and as a result, the 1966 acreage planted to cotton is the smallest in 100 years. This should result in a sharp reduction in cotton production for 1966 as compared to production in 1965.

The price support loan rate for 1966 is 90 percent of the estimated world price. This, in turn, is expected to make American cotton competitive with cotton from foreign countries. This should increase domestic and export consumption of cotton.

Voluntary diversion programs are offered to cotton, feed grain and wheat farmers.

SECTION IX

SUGAR PROGRAM

MAINLAND SUGAR CANE PROGRAM

Sugar cane for the production of sugar is grown only in Louisiana and Florida.

The broad purposes of this program are to maintain a healthy and competitive sugar industry; to assure adequate sugar supplies for consumers at reasonable prices; and to promote general export trade.

Main features of the sugar program include the determination each year of the amount of sugar which will be needed to fill United States' requirements; the establishment of "quotas" which determine the share of this market which will be available for each domestic and foreign producing area.

When estimated production is in excess of quotas established for mills in Louisiana and Florida, farm sugar cane proportionate shares (allotments) are established for all sugar farms. Farms that do not harvest an acreage of sugar cane for sugar in excess of the farm proportionate share and that comply with other requirements involving the payment of minimum wages, child labor, et cetera, receive a "conditional payment." The conditional payment made to a farm is based upon the quantity of commercially recoverable sugar extracted from the cane produced.

The conditional payments to producers are financed out of the general funds of the Treasury; however, import taxes on sugar provide funds for the Treasury which more than offset all costs of the program.

Proportionate shares are in effect for the 1966 crop.

SECTION X

PRICE SUPPORT PROGRAM

Price support programs are designed to guarantee farmers a reasonable return for their commodities as well as to provide them with a means for the orderly marketing of commodities. While price support is mandatory for some commodities, support is permissive for all other commodities. In 1965, price support was in effect in Louisiana on cotton, rice, soybeans, feed grains, peanuts, wheat, cottonseed, tung oil, honey, and wool.

Prices are supported by loans and purchases, and direct payments. Loans and purchases support prices in two major ways:

- (1) By providing farmers a cash return for the commodity at the support level, and
- (2) By strengthening market prices of the commodity through withdrawal of supplies from the market.

Loans are made to farmers on commodities which may be stored on the farm or in an approved warehouse of his choice. At any time the market price for the commodity exceeds the loan rate, he may redeem the commodity by paying the amount of loan plus a small interest fee. If the commodity is not redeemed by maturity date, which is usually the end of the marketing year, the Government takes title of the commodity.

In addition to supporting the price of commodities as mentioned above, the farm storage facility loan program is available to farmers in Louisiana. Under the program, the farmer has an opportunity to obtain a loan at a reasonable interest rate to construct facilities for the storage of commodities on the farm. This program has been in operation since June 15, 1949, and loans approximating 1.3 million dollars covering construction of facilities with a storage capacity of a little more than 2.9 million bushels have been made to farmers in Louisiana.

...the Government is authorized to guarantee farmers
 loans for their commodities as well as to
 make for the orderly marketing of
 these commodities. The Government's support is mandatory for some
 commodities, permissive for all other commodities.
 In 1962, price support was in effect in Louisiana
 for rice, soybeans, feed grains, peanuts, wheat,
 and wool.

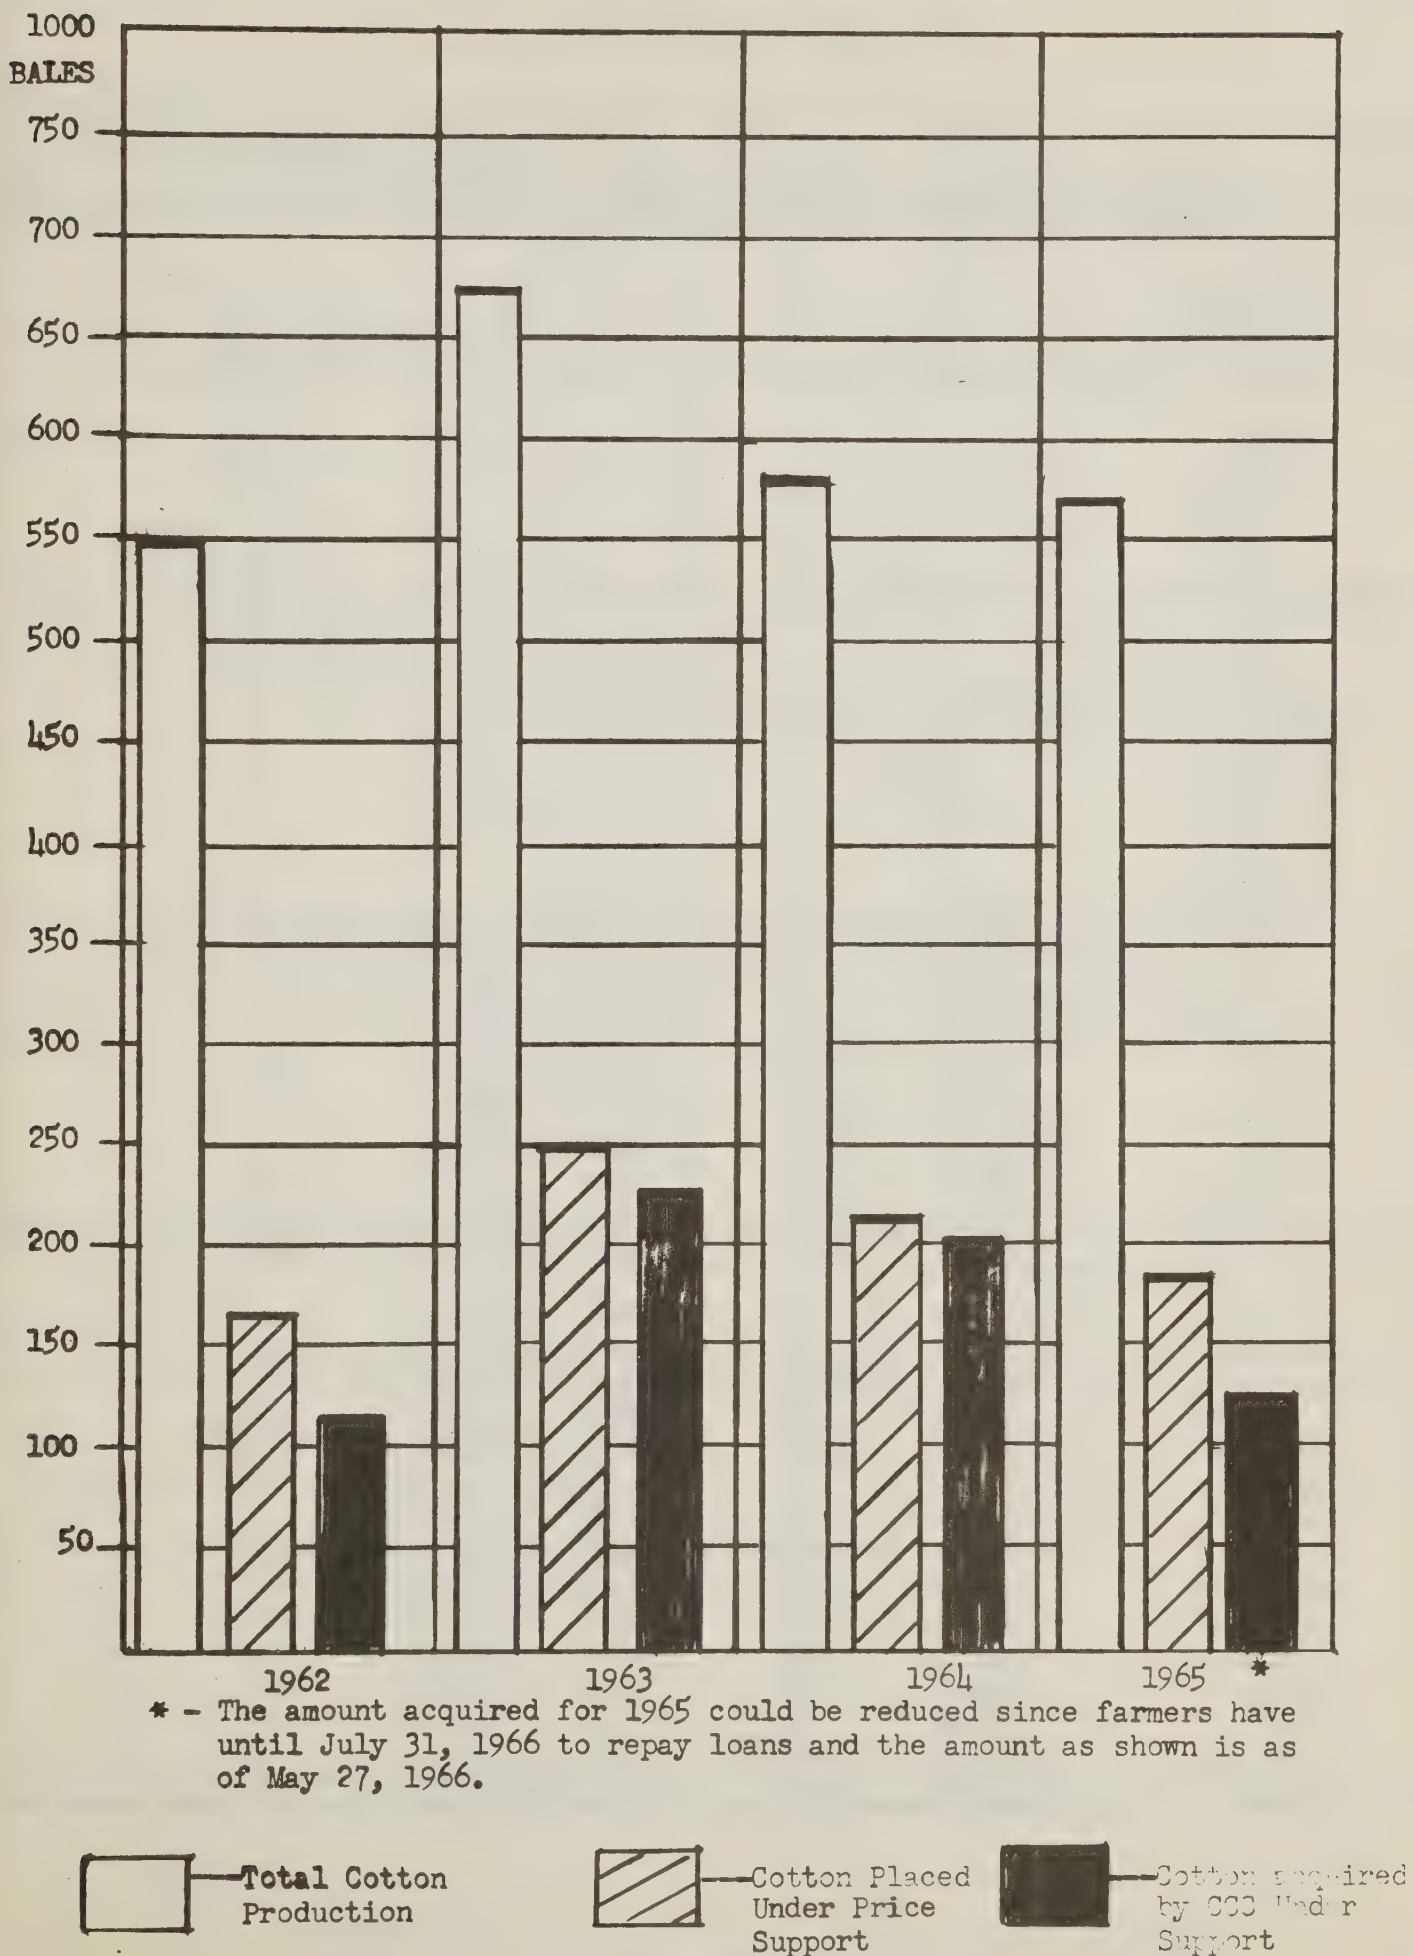

Prices are supported by loans and purchases, and direct
 payments. Loans and purchases support prices in two major
 ways:

- (1) By providing farmers a cash return for
 the commodity at the support level, and
- (2) By strengthening market prices of the
 commodity through withdrawal of supplies
 from the market.

Loans are made to farmers on commodities which may be stored
 in the Government's approved warehouse of their choice. At
 the time the loan is made, the commodity exceeds the loan
 price. The commodity is sold to the Government at the loan
 price. If the commodity is not sold,
 the interest fee, which is usually the end of the
 loan, the Government takes title of the commodity.

Supporting the price of commodities as men-
 tioned in the farm storage facility loan program is
 the program in Louisiana. The program gives
 farmers an opportunity to obtain a loan at a reasonable
 rate of interest. The storage of
 this program has been in operation
 since 1954. The program has been
 successful in helping farmers with a storage
 facility. The program has been successful in helping
 farmers with a storage facility. The program has been
 successful in helping farmers with a storage facility.

SECTION XI

EMERGENCY PROGRAMS

There are several types of programs that can be made available to farmers as a result of a disaster. The type of program that is made available is determined from facts resulting from a survey of the affected area. The main types of programs that are available are:

1. Short Term Disaster Feed Grain Donation Program. This program is usually offered for eligible livestock following a sudden disaster, such as tornadoes, flash floods, or hurricanes. Livestock under these conditions are usually commingled and stranded. CCC grain is made available to feed livestock at no cost to the farmer for a period of about 30 days.

2. Livestock Feed Program. The Livestock Feed Program is made available to livestock owners suffering from flood, drought, or other catastrophes, and who could not obtain sufficient feed from normal trade channels without undergoing undue financial hardship.

CCC-owned grain is made available to feed foundation herds or dairy cattle at 75 percent of the price support rate and to feed other cattle at the price support rate. This cheaper source of feed prevents undue liquidation of herds during an emergency. The program is usually made available until pastures and hay crops are restored to normal.

3. Seasonal Grazing or Haying on Land Retired by USDA Programs. This program is made available to livestock owners suffering from prolonged drought, flood, and other sudden or gradual disaster which damages hay and pasture lands and threatens undue liquidation of livestock. Farmers are afforded the opportunity to utilize the forage on land taken out of production under the various USDA programs. For this privilege, the payments which would otherwise be made for retiring the land are reduced by the fair value of vegetation grazed or harvested.

Seasonal Grazing and Haying on Land
Retired by USDA Programs in 1965

SECTION XII

COMPLIANCE OPERATIONS

The purpose of the Compliance Program is to verify that farmers are complying with the provisions of various ASCS programs in which they are participating. The State committee is responsible for establishing policy, issuing procedures and furnishing supervision in carrying out this program. The county committees, through their office manager, are responsible for employing and directing field and office personnel who perform this work.

These operations require that acreage of various crops be accurately determined for each farm taking part in any of these programs. Prior to 1965, the parish offices employed temporary field reporters (approximately 400 in the State) during the summer months who visited all farms and measured all fields of each crop on such farms. These measurements are made by the use of aerial photographs which have been developed to a precise scale from which acreages can be measured accurately without the use of any special surveying equipment. In 1964, parish offices measured approximately 23,000 cotton farms, 5,000 rice farms, 1,200 wheat farms, 3,000 sugar farms, and 10,000 feed grain farms at a cost of about \$150,000.

In 1965, a new method of determining acreage was tried on an experimental basis in ten South Central Louisiana parishes. Under this method, known as the "Certification" Method, reporters did not visit any farms and farmers were required to report their acreages to the parish office. Prior to the established reporting date, each farmer was furnished with a photocopy of his farm showing all field boundaries, an identification number for each field and acreage in each field which had been previously determined by the parish office. The farmer indicated on his copy of the photocopy, the type of crop grown in each field and returned his copy to the parish office where acreages for each crop were summarized and entered on office records as the official acreage for that year. After all reports were in, the parish office measured 25% of these farms to determine the accuracy of farmers' certifications.

The results of the experiment in 1965 were good and eleven additional parishes (cotton, rice and feed grain) were designated to use this system in 1966. If results continue good, all parishes will follow this system by 1968.

The use of the certification method will result in an enormous savings in administrative expenses and farmers appear to be much more satisfied with this method than the method used prior to 1965.

SECTION XIII

MEASUREMENT SERVICE

Parish committees offer several types of measurement services to farmers to assist them in planning their current, as well as future, farming operations. Farmers are required to pay a small fee to cover the cost of furnishing this service. "Premeasurement" is the principal service utilized by farmers. Under this service, a parish employee visits the farm and stakes off the exact acreage which the farmer desires to plant to an allotment crop. In this way, farmers are assured that they will utilize their entire allotment and also that they will not have to dispose of any excess acreage on which they have incurred the expense of planting, cultivating, fertilizing, etc. Other services include the establishment of official acreages for individual fields for use in future years and the determinations of total cropland on the farm.
